Results-driven **Java Backend Engineer** seeking to leverage expertise in **Enterprise Application Development, Back-end Architecture, Cloud Technologies**, and security-focused solutions to contribute to scalable digital transformation initiatives and business growth.

Core Competencies

Java Back-end Development

Spring Boot Application Development

Enterprise Application Architecture

RESTful API Development & Integration

Microservices Development

Authentication & Authorization Management

Single Sign-On (SSO) Implementation

Application Security & Vulnerability Remediation

Database Design & Performance Optimization

Cloud Deployment & Production Support

Risk & Regulatory Compliance Solutions Development

Education

Bachelor of Technology (B.Tech)
in **Computer Science Engineering** | GLA University, Mathura | 2018 – 2022

Soft Skills

Critical Thinking

Problem Solving

Analytical Thinking

Stakeholder Management

Profile Summary

- Java Backend Engineer with 4+ years of experience** in delivering secure, scalable, and high-performance enterprise applications across **Banking and Transportation** domains.
- Proficient in **Java, Spring Boot, Hibernate, PostgreSQL, and RESTful API development**, with strong expertise in backend architecture and application lifecycle management.
- Experienced in implementing enterprise security frameworks, authentication systems, and regulatory-compliant solutions** for mission-critical business applications.
- Skilled in cloud deployment, production support, application hosting**, and platform reliability across AWS and Linux-based environments.
- Recognized for driving technology modernization initiatives**, strengthening application security, and ensuring seamless delivery of business-critical solutions.
- Awarded the Extra Mile Award for outstanding contributions** to banking transformation projects, security enhancements, and reliable production deployments.

Technical Skills

- Programming Languages:** Java, SQL
- Frameworks & Libraries:** Spring Boot, Spring MVC, Spring Security, Hibernate, JPA
- Databases:** PostgreSQL, MySQL, Redis
- API & Documentation:** RESTful APIs, Swagger (OpenAPI), Postman
- Security & Authentication:** JWT Token, OAuth 2.0, Authorization, SSL/TLS
- Cloud & Infrastructure:** AWS
- DevOps & Containerization:** Docker, Kubernetes, Apache Kafka
- Application Servers:** Apache Tomcat
- Build & Dependency Management:** Maven
- Version Control:** Git, GitHub
- Operating Systems:** Linux
- Testing & Logging:** JUnit, Mockito, log4j

Awards, Training & Certification

- Received a Silver Medal and Merit Certificate** from the **Chief Minister of Uttar Pradesh, Yogi Adityanath**, for securing **2nd rank in the branch**.
- Completed Data Structures training** through Coursera and Coding Ninjas.
- Solved 1000+ problems** on LeetCode.

Career Timeline

Feb 2022 – Apr 2023: Software Engineer | Navyug Infosolution Private Ltd., Noida

Jul 2023 – Present: Digital Engineer | DGLiger Consulting Pvt. Ltd., Gurugram

Work Experience

Jul 2023 – Present: Digital Engineer | DGLiger Consulting Pvt. Ltd., Gurugram

Client: Punjab National Bank (SSO, GAP & RBS Applications)

Key Highlights:

- Engineered, developed, and deployed secure enterprise-scale banking applications using Java, Spring and Boot, modernizing core banking workflows and supporting high-availability services.

Research & Publications

- Authored the chapter "**Progress of Covid-19 epidemic in India**" in the book "Health Informatics & technological solution for Coronavirus," published by SRC Press London.
- Presented a research paper titled "**AI Based Result prediction System**" at an Online International conference on Advances in computing, communication and control organized by I.I.T University.
- Presented a research paper titled "**Prediction of student's performance based on ML and AI**" at FASET 2020, organized by GLA University.

Personal Details

- **Date of Birth:** 21st Sept 2000
- **Languages:** English, Hindi
- **Address:** New Delhi, India

- Architected and implemented OAuth 2.0-based Single Sign-On (SSO) solutions using Spring Security, centralizing authentication, **reducing login failures by 40%**, and **improving sign-in performance by 1.8 seconds**.
- Directed production hosting activities and strengthened application security on Apache Tomcat, **upgrading from version 9.0.98 to 9.0.108** to remediate critical vulnerabilities and enhance platform stability.
- **Implemented SSL/TLS certificates** across production environments, enabling secure encrypted communication and ensuring adherence to enterprise and regulatory security standards.
- Spearheaded the design and delivery of the Generalized Application Platform (GAP), improving operational efficiency and supporting regulatory compliance across multiple banking functions.
- Led the development of the Risk-Based Supervision (RBS) system, enabling real-time risk monitoring, strengthening regulatory oversight, and streamlining supervisory processes.
- Earned an **Appreciation Certificate from the General Manager, GSAD Division**, Punjab National Bank, for developing a Branch Ambience Portal that automated branch evaluations through multi-level validation and generated star-rating certificates based on data warehouse verification.
- Received an **Appreciation Certificate from the General Manager, FRMIS**, for designing and implementing a Fraud Reporting Portal that streamlined RBI-compliant fraud submissions and enabled Lien/Freeze functionality for account and amount-level restrictions.
- Integrated IBM DataStage servers for the PNB environment and developed a centralized monitoring dashboard to track scheduled, aborted, and periodic ETL jobs, improving operational visibility and issue resolution.
- Implemented CCIL POUT API integrations to automate the retrieval of securities-related data, enhancing the accuracy and efficiency of treasury operations.
- **Successfully upgraded Apache Tomcat from version 9.0.108 to 9.0.118**, mitigating identified vulnerabilities across GAP/SSO and RBS application servers while ensuring system stability.
- Designed and deployed an RBI-compliant Daily Monitoring System integrated with SSO authentication, leveraging multithreading and Java Collections to support **concurrent access for 7,000–10,000 branches** and enable seamless transaction verification.

Feb 2022 – Apr 2023: Software Engineer | Navyug Infosolution Private Ltd., Noida

Client: Bytecurve LLC

Key Highlights:

- Delivered end-to-end development of a transportation platform, managing the complete lifecycle from requirement analysis through production deployment on AWS.
- Developed scalable, cloud-ready backend services and robust APIs using Java, Spring Boot, and SQL to support business-critical platform operations.
- Administered application hosting and Apache Tomcat deployments within AWS environments, ensuring high availability, system reliability, and stable production performance.
- Earned multiple recognitions for demonstrating strong technical ownership and consistently delivering high-quality features within project timelines.
